

Join Our Team as a Junior Project Engineer!

At Integra, we recognize that new graduates are a vital part of our project delivery team! For the past ten years, we have proudly been recognized as one of Canada's Best Employers for Recent Graduates.

We are looking for individuals who not only have practical field experience but also embody our core values of INTEGRITY, FAMILY, EXCELLENCE, & CREATIVITY.

Key Duties and Responsibilities:

As a Junior Project Engineer, you will play a crucial role in both engineering design and project management, ensuring the successful execution of client projects. Your responsibilities will include:

- Assisting in the development of Process Flow Diagrams (PFDs) and Piping & Instrumentation Diagrams (P&IDs).
- Performing engineering calculations to support project design and execution.
- Assisting in the preparation of cost estimates, equipment lists, and bills of material.
- Collaborating with internal departments, client representatives, and vendors to ensure seamless project execution.
- Supporting equipment and service procurement activities.
- Preparing technical reports and documentation.
- Engaging in continuous learning and professional development to enhance technical expertise.

Qualifications:

- Bachelor's degree in mechanical or chemical engineering.
- Registered as an EIT with APEGA or APEGS.
- Strong written and verbal communication skills.
- Demonstrated mechanical aptitude and problem-solving abilities.
- Ability to build relationships and network effectively both internally and externally.
- A strong desire to learn and grow in a collaborative environment.

If you're a motivated individual eager to launch your engineering career in a dynamic and supportive workplace, we encourage you to apply and be part of our innovative team at Integra!
